Quote on 2023

As we conclude calendar 2023, India ranks firmly as the world's third largest energy consuming country. Its consolidated renewable energy capacity is a little more than 416 GW – the world's fourth largest. Within this, 47 GW is hydropower.

While the untapped potential is huge, we are encouraged by the fact that while in calendar 2023 renewable energy continued to dominate India's power generation capacity addition, the role of small hydropower projects is coming into its element. Of the 17 GW of energy added in calendar 2023, as much as 92% came from renewables as a whole and small hydropower projects added 42.45MW
